Education

M.S. Computer Science - UC San Diego Sep 2026 - Jun 2028 (Expected)
- Current Coursework: Human-Computer Interaction (HCI), FPGA Hardware Acceleration & System Design

B.S. Computer Science: Game Design - UC Santa Cruz Sep 2022 - Jun 2026
- Focus areas: Procedural Generation, Game Development, LLMs, Computer Vision, and Robotics
- Coursework: Rapid Prototyping, Game Writing, Procedural Audio Generation, Game Production, Marketing

Projects

AstroFrame – Steam Nov 2025 - Current
Technologies: Godot, Python, HLSL Shaders, Steamworks
- Led a 7-person team to build and release a spaceship building and exploration game on Steam.
- Executed the complete development lifecycle from pre-production through production and successful playtest release, with full release upcoming.
- Organized team meetings, managed milestones, and met deliverables within a mock production studio class environment.
- Attended the Game Developers Conference (GDC) 2026, showcasing the game at multiple exhibition events.

Experience

Engineering Game Lab Manager – UCSC Baskin Engineering Lab Support Sep 2025 - Aug 2026
Technologies: Affinity, Canva, Python, Google Sheets, Google Apps Script
- Supported 25 capstone projects (teams of 5–12) and facilitated community for ∼200 capstone students.
- Maintained lab facilities across 5 rooms, serviced computers and game consoles, organized supplies, and created technical documentation and signage.
- Built and deployed an inventory system managing 2,500+ hardware components and development kits across UCSC engineering labs, automating workflows for easy data reentry and status updates.

Software Development Intern – Guide Robotics (Tokyo, Japan) Jun 2025 - Aug 2025
Technologies: Unix, ROS2, Gazebo, RViz, OpenCV, YOLO, Python
- Configured ROS and Gazebo environments to simulate a TurtleBot 4, successfully integrating both the digital twin and physical robot with internal software tools.
- Researched and implemented a YOLO-based computer vision model for object identification on a Qualcomm RB3 Gen 2 Development Kit.

Software Researcher – UCSC Procedural Generation Lab Sep 2024 - Jun 2025
Technologies: TypeScript, LLMs, Python, LaTeX
- Co-authored a conference paper published at FDG, contributing to research and technical details.
- Programmed scripts to generate procedural worlds using algorithms like Wave Function Collapse.
- Compiled several datasets for use in training Large Language Models and fine-tuned LLMs.

Tutor and Grader – UCSC Baskin School of Engineering Sep 2024 - Jun 2025
Technologies: Blender 3D, Adobe Substance
- Conducted weekly meetings leading 60+ students in guided 3D modeling lessons.
- Developed teaching materials, made video lectures, graded coursework for 120 students, and provided detailed feedback to students in preparation for exams.

Independent Contractor – Turbostrat LLC Mar 2024 - Apr 2024
Technologies: Unity, Figma, C#, Augmented Reality (AR)
- Designed and implemented an interactive UI and tutorial for a mobile AR adaptation of *Breakout*.
- Planned, architected, and documented software systems and UX design.

Robotics Club Team Lead – UCSC Slugbotics Arm Team Sep 2023 - Jun 2025
Technologies: Python, YOLO, APIs, Git, CoppeliaSim
- Engineered a lightweight 3-DOF open-source robotic arm; maintained and expanded the codebase.
- Organized team meetings, demonstrated progress to club leadership, and onboarded 30 new club members.
- Showcased the project live at the Open Sauce 2024 conference.

Skills

Languages	Python, C# (Unity), C, C++, JavaScript, TypeScript, HTML, CSS
Technologies	Unity, Godot, ROS2, Gazebo, OpenCV, YOLO, RViz, LLMs, APIs, Git, Unix, Steamworks, LaTeX
Interests; Awards	Sailing, Hiking, Music, Paleontology ; Dean's Honors, Eagle Scout
